

" RFI Eraser " : SDR# > IFavg > HL3D > Rinearn Software : Update

" RFI Eraser " noise reduction processing has been added to the **HL3D** Java code.

Suggestion :

Process the data first with Filter Width = 0 to get an uncorrected baseline of your data

IF there are RFI spikes in the spectrum, try Filtering

Start with small filter width values, save the *.CSV file set & compare via Rinearn .

Highly Over-correcting degrades the H data.

Alex Pettit

AND, of Equal Importance :

" RFI Eraser " only adds a bit of smoothing to an RFI Free Data Set
