Milky Way Neutral Hydrogen

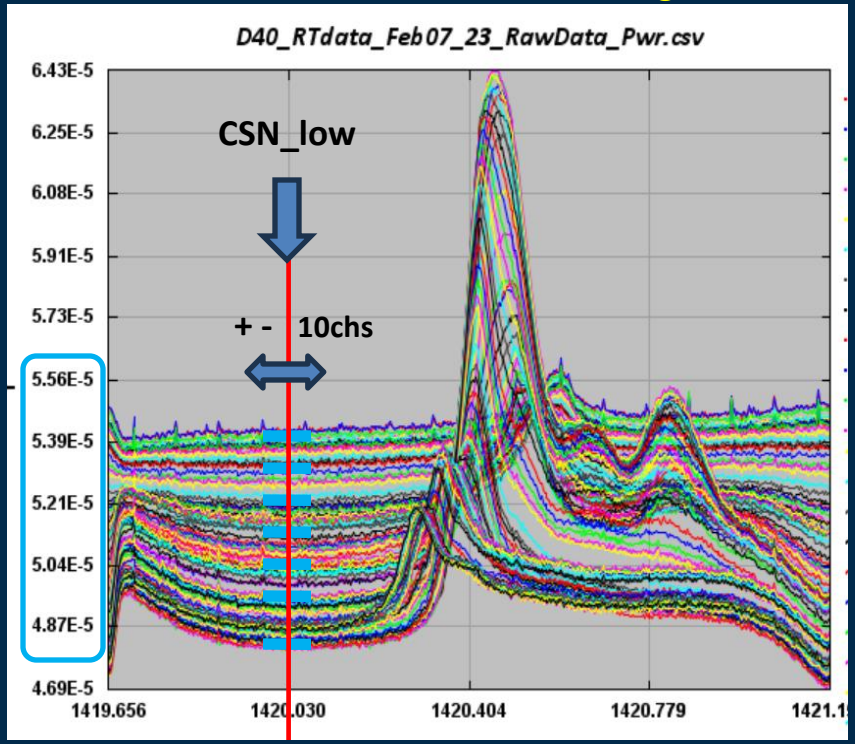

Background Drift Correction

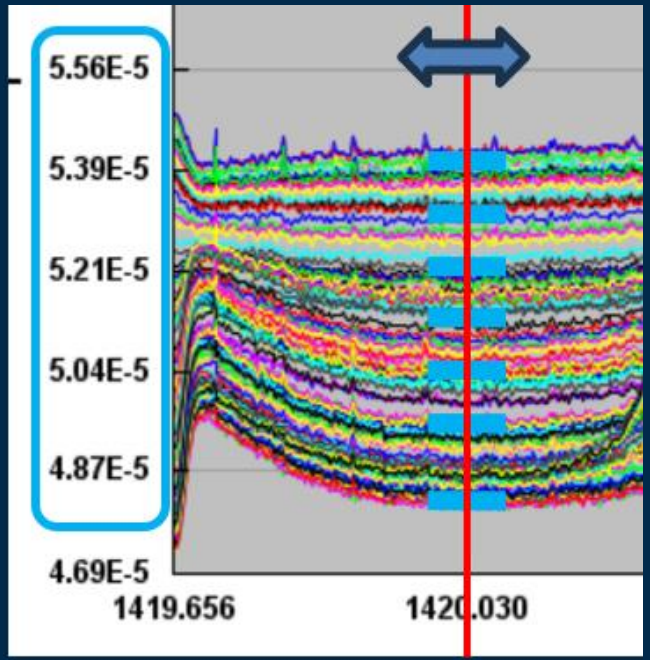

b a pettit jr Oct '26

“ Cold Sky” Background Drift Correction

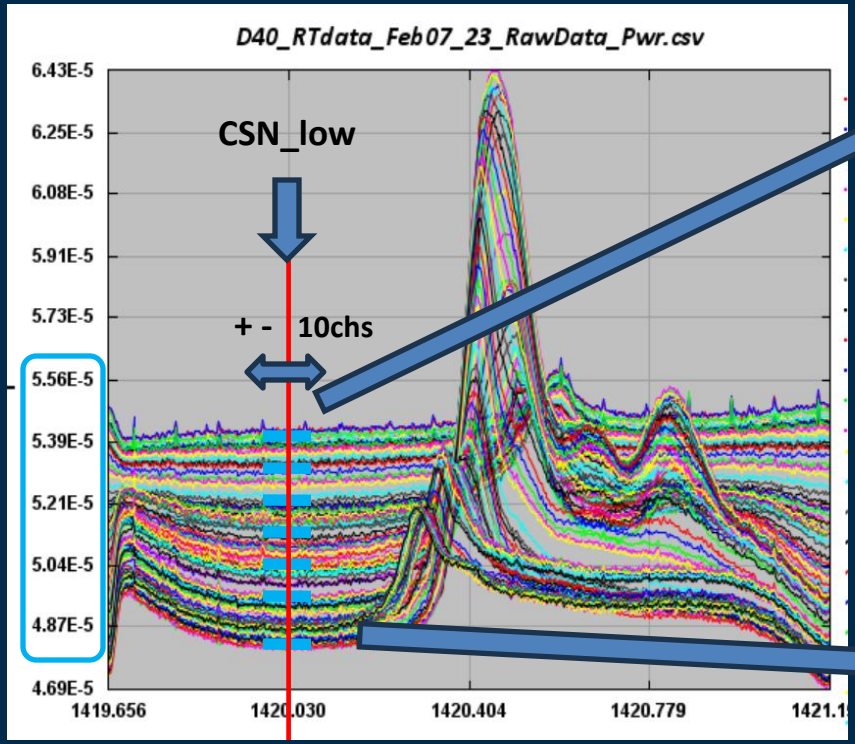

Convert IFavg data to Power (square the amplitudes)
Select a region of Cold Sky &
Calculate the average Power Level over +- 10 channels about that frequency

“ Cold Sky” Background Drift Correction

Using a percentage of the Mean in addition to the Minimum provides more stable results in maintaining calibrated *H1 pk over Cold_Sky calculations*

Calculate

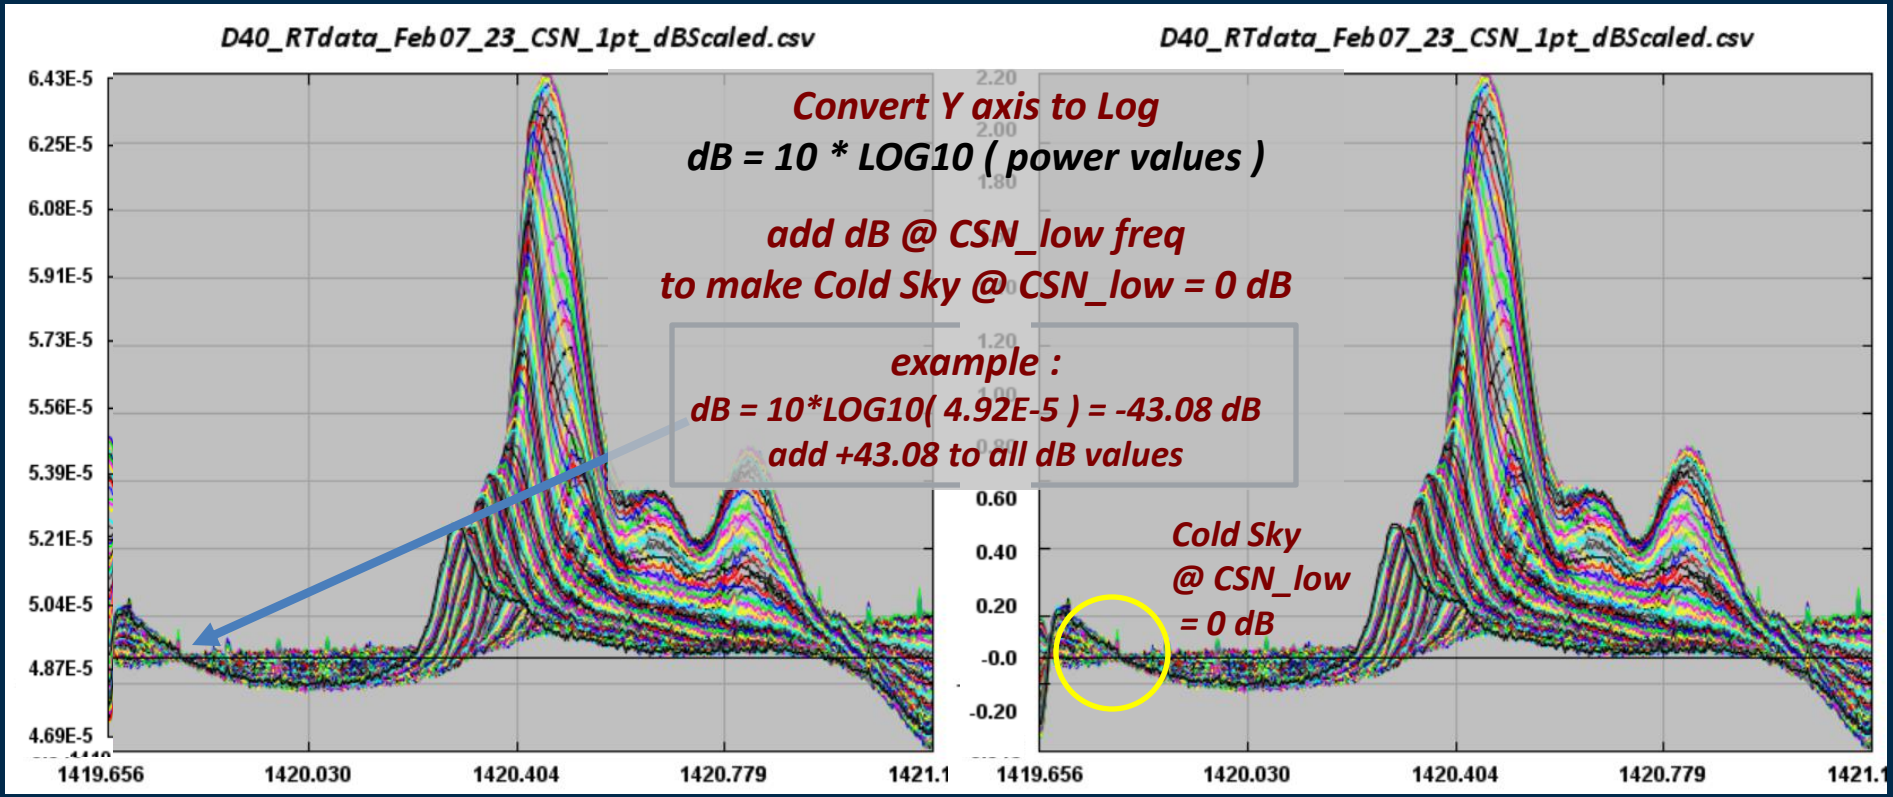

Cold Sky Low Correction Value =

(0.33) * (Mean - Min) + Min
